

GREEN POLICY

At Roux Blond, we have an ongoing commitment for the care of our environment and recognise the role we play in contribution to a sustainable future for all.

Our commitment includes:

PRODUCE

We engage local producers and services, where possible

We engage producers and suppliers that have sustainable practices, and free-range and organic produce where possible.

We have developed specialised menus for events that showcase local and regional produce.

We have implemented our own kitchen garden for the production of some herbs and spices we require.

Environmentally friendly eco-products are used in garden maintenance and care.

WASTE & WATER

Food waste, where possible, is composted and used within our own kitchen garden.

All food produced in our kitchen is prepared from fresh ingredients, reducing additional waste/packaging from pre-packaged or mass produced items.

Food is ordered and prepared only as required and only for the required quantity for the event. All produce is used wholly and fully where we produce little waste and spoilage.

Cardboard and packaging etc, is reused or recycled.

Where possible, our kitchen uses only biodegradable cleaning products.

In the event where disposable wares are required for an event, we only use biodegradable or recycled products, such as bamboo or wood cutlery, bioplastics from renewable resources, or bagasse/sugar cane packaging.

Watering schedules are followed as per the local council restrictions/policies.

All taps, toilets and hoses are maintained and any leaks are promptly attended to.

OPERATIONS

Reduce - Reuse - Recycle.

Printing is limited, distributing all proposals and portfolios electronically.

Where printing is required, all print settings are set to a default double-sided print and reduced ink settings.

Documents are shredded and recycled, and any other paper is reused as note pads if possible.

Employees understand, appreciate and conform to our environmental policies.

We encourage our business partners, suppliers and associates to also practice environmental sustainability where possible.

ENERGY

Air conditioning use is limited where possible and set to 25 degrees only.

Light bulbs changed to LED where possible.

Implementing the use of modern technologies and appliances with high energy efficiencies.

Equipment temperature checks completed throughout the day to ensure equipment is working efficiently at all times.

Roux Blond Collective considers the impact on the environment(s) we work in continuously to ensure we operate in an environmentally sustainable manner across all areas of the Roux Blond Collective.
